INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/NL 02/00720

I. Basis	of t	he ı	rep	ort
----------	------	------	-----	-----

1. With regard to the **elements** of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)):

	Des	cription, Pages							
	1-10)	as originally filed						
	Clai	ms, Numbers							
	1-16	3	as originally filed						
	Dra	wings, Sheets							
	1/2-2	2/2	as originally filed						
2.			age, all the elements marked above were available or furnished to this Authority in the ernational application was filed, unless otherwise indicated under this item.						
	The	These elements were available or furnished to this Authority in the following language: , which is:							
		the language of a tra	e language of a translation furnished for the purposes of the international search (under Rule 23.1(b)).						
		the language of publ	ication of the international application (under Rule 48.3(b)).						
		the language of a tra Rule 55.2 and/or 55.3	nslation furnished for the purposes of international preliminary examination (under 3).						
3.	With inte	n regard to any nucle rnational preliminary (otide and/or amino acid sequence disclosed in the international application, the examination was carried out on the basis of the sequence listing:						
		contained in the international application in written form.							
		filed together with the international application in computer readable form.							
		furnished subsequently to this Authority in written form.							
		furnished subsequently to this Authority in computer readable form.							
		The statement that to in the international a	he subsequently furnished written sequence listing does not go beyond the disclosure pplication as filed has been furnished.						
		The statement that the listing has been furn	he information recorded in computer readable form is identical to the written sequence ished.						
4.	The	amendments have re	esulted in the cancellation of:						
		the description,	pages:						
		the claims,	Nos.:						
		the drawings,	sheets:

see separate sheet

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. **Documents**

- 1.1 Reference is made to the following documents:
- 1.2 D1: López-Serrano et al., Biotech. Lett., vol. 24, Aug. 2002, pp. 1379-1383

D2: EP1088887

D3: Cao et al., Organic Letters, vol. 2, 2000, pp. 1361-1364

D4: WO0040331

- 2. Novelty (Art. 33(2) PCT)
- The present application does not satisfy the criterion set forth in Article 33(2) PCT 2.1 because the subject-matter of claims 1-3, 5, 7 and 8 is not new in respect of prior art as defined in the regulations (Rule 64(1)-(3) PCT).
- 2.2 D1 discloses (pages 1379-1380; Tables 1 and 2) a method for creating Crosslinked Enzyme Aggregates (CLEA) comprising an aggregation step and a crosslinking step. The method is based on a basic recipe ("general procedure"; page 1380, left column, second paragraph) that is then varied to arrive at CLEA:s with different properties. CLEA:s with suitable properties can then be selected. Claims 1-3, 5, 7 and 8 are, therefore, not novel over D1.
- 2.3 **D2** discloses ([0009]-[0011]) a method for creating Crosslinked Enzyme Aggregates (CLEA) comprising an aggregation step and a crosslinking step. D1 further discloses ([0012]-[0014]; examples) variations that can be performed, in order to arrive a CLEA:s with different properties. Claims 1 and 5 are, thus, not novel over D2.
- 2.4 Claims 4, 6, 9-16 seems to contain subject-matter that is novel over the cited prior art documents.

- Inventive step (Art. 33(3) PCT) 3.
- The present application does not satisfy the criterion set forth in Article 33(3) PCT 3.1 because the subject-matter of claims 1-16 does not involve an inventive step (Rule 65(1)(2) PCT).
- 3.2 All claims found to be not novel are also considered as not inventive. Even if novelty could be reinstated for these claims, no inventive activity can be accepted for the below reason.
- Claim 1 is concerned with a method for creating a library of CLEA:s, wherein the CLEA is prepared by a method comprising an aggregation step and a crosslinking step. The method is performed according to a basic recipe, that is then varied to obtain the CLEA:s of the library.
- 3.4 Document D2 is considered to represent the most relevant state of the art and discloses ([0009]-[0011]) the method of the basic recipe of the present application, and also that variations in this recipe can be performed ([0012]-[0014]; examples).
- 3.5 The subject-matter of claim 1 differs in that a "library" of CLEA:s is created.
- A library of CLEA:s is, however, nothing else than a number of CLEA:s, each with a 3.6 somewhat different property. This is not different from what is obtained by varying the method of D2, as exemplified in the examples of D2. Claim 1 can, thus, neither be seen as being novel, nor as involving and inventive step.
- 3.7 Furthermore, regardless of, if D2 describes variations of the basic recipe, such variations can not be regarded as inventive. Such variations are simply what any person skilled in the art would do, and has always done, when faced with the problem to obtain a somewhat different product (CLEA). He would then vary (one or several) of the parameters of the basic recipe used and choose, from the "library" so produced, the product (CLEA) showing the optimal properties. If he does these variation in parallel or after each other, is up to his own liking. Such variations of a basic recipe is also disclosed in D1 (page 138, left column, second paragraph) and D3 (page 1362, right column; fig. 2). No inventive activity can, thus, be accepted for claim 1.
- 3.8 Dependent claims 2-11, do not seem to contain any subject-matter that could not be

arrived at from D2, by a person skilled in the art, without applying inventive skill, either directly or by combining with the general technical knowledge of such a person.

- 3.9 Claim 12 is concerned with a system using the method of claim 1.
- 3.10 Systems for more or less automatic methods are well-known in the art, e.g. D4 (page 13, line 5 - page 14, line 28; figures). To combine such a system with the noninventive method of claim 1 would be obvious for a person skilled in the art wanting to automate the production of CLEA libraries. No inventive activity can, therefor, be accepted for claim 12.
- 3.11 Dependent claims 12-16, do not seem to contain any subject-matter that could not be arrived at from **D2**, by a person skilled in the art, without applying inventive skill, either directly or by combining with D4 and/or the general technical knowledge of such a person.

4. **Further comments**

- In agreement with the requirements of Rule 5.1(a)(ii) PCT documents D2-D4 should be identified in the description and their relevant subject-matter briefly discussed.
- 4.2 The statement of page 1, line 10 might not be acceptable in certain regional procedures (e.g the European).
